

Clear Aligners

Clearsmile Aligners straightens and improves the appearance of front teeth.

An aligner is a removable transparent brace made of very thin plastic that only covers your teeth.

You wear each aligner for 1-2 weeks, removing it only to eat, drink, brush and floss.

As you replace each aligner with the next one in the series, your teeth will move- little by little, week by week- until that have straightened to the final position.

An average case needs 4-18 aligners, it depends on how much the teeth need to be moved

Smile Package
