

# Inman Aligner

The Inman Aligner is a cost-effective removable orthodontic appliance that moves teeth in a fraction of the time of other systems. It straightens crowded or protruding front teeth.

It provides gentle but continuous pressure over a large range of movement. Surprisingly, this gentle pressure is the quickest way to move teeth but it also makes treatment very safe and kind to teeth.

People love the speed of treatment and it's changing the face of dentistry as we know it. The average treatment time is only **4-16 weeks**.
